

Technical Information

Liquicap M FTI51, FTI52

Level limit switch

Universal capacitive limit switch for liquids

Application

The Liquicap M FTI5x is a compact transmitter for level limit detection. It is preferably used for the following measuring tasks:

- Measurement of liquids that are highly viscous and tend to form build-up
- Interface detection of different liquids (e.g. oil on water)
- Two-point control (pump control) with just one process connection
- Foam detection of conductive liquids

Thanks to its robust and tried-and-tested construction (self-sealing cone), the probe can be used both in vacuums and in overpressure up to 100 bar. The sealing and insulation materials used allow operating temperatures of -80 °C to +200 °C in the medium container.

Your benefits

- Active build-up compensation for high-viscosity media
- Easy and fast commissioning as calibration takes place at the press of a button
- Universal application thanks to wide range of certificates and approvals
- Material in contact with the process made of corrosion-resistant material and FDA-listed materials for wetted parts
- Two-stage overvoltage protection against discharge from the container (gas discharger + protective diodes)
- Short measured value reaction time
- No need for recalibration after replacing electronics
- Automatic monitoring of electronics

Function and system design

Measuring principle

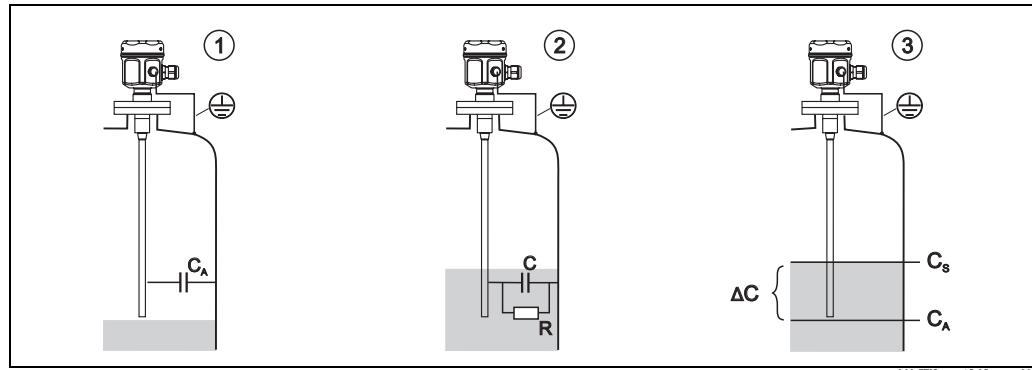

The principle of capacitive level limit detection is based on the change in capacitance of the capacitor due to the probe being covered by liquid. The probe and container wall (conductive material) form an electric capacitor. When the probe is in air ①, a certain low initial capacitance is measured. When the container is filled, the capacitance of the capacitor increases the more the probe is covered ②, ③.

The limit switch switches when the capacitance C_s specified during calibration is reached. Furthermore, the system also prevents the effect of medium build-up or condensate near the process connection for probes with an inactive length. A probe with active build-up compensation compensates influences resulting from build-up on the probe.

Note!

A ground tube is used as a counterelectrode for containers made of nonconductive materials.

L00-FT15xxxx-15-05-xx-xx-00

R: Conductivity of liquid

C: Capacitance of liquid

C_A : Initial capacitance (probe not covered)

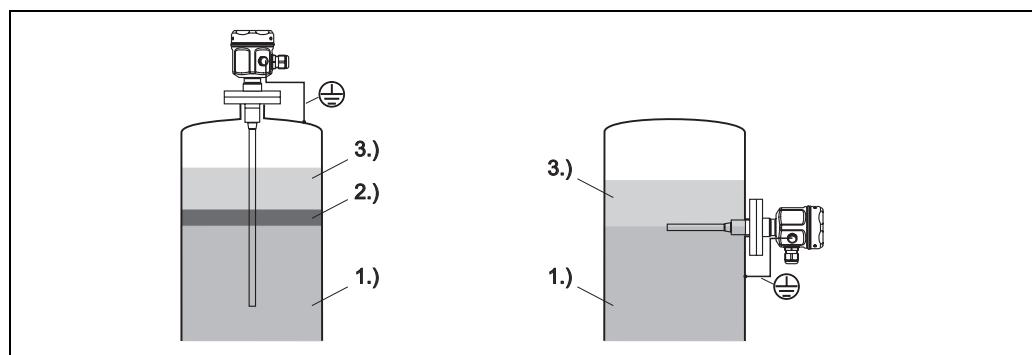

C_s : Switching capacitance

ΔC : Change in capacitance

Function

The selected electronic insert of the probe determines the change in capacitance of the liquid depending on how much the probe is covered and thereby allows precise switching at the switch point (level) calibrated for this.

Interface detection

L00-FT15xxxx-15-05-xx-xx-00

1.) Water, for example (the medium must be conductive $\geq 100 \mu S/cm$)

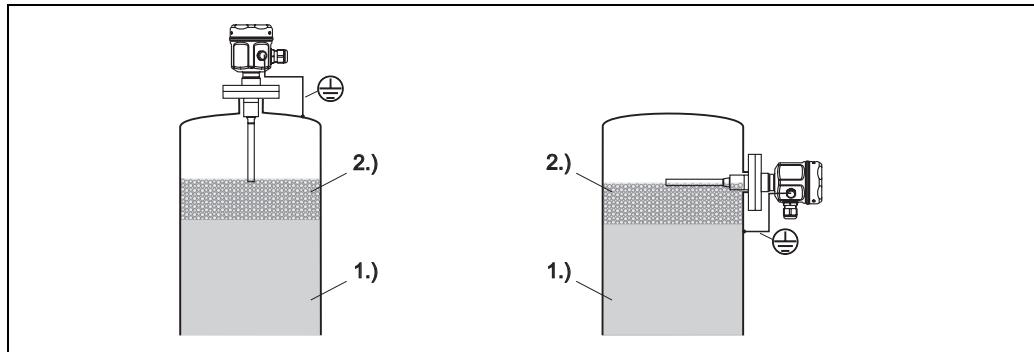

2.) Emulsion

3.) Oil, for example (nonconductive medium $< 1 \mu S/cm$)

A certain and definite switch point is ensured even if the emulsion layer is of varying thickness.

Foam detection

Foam detection for conductive liquids.

- 1.) Liquid
2.) Foam

Note!
Preferably use partially insulated probes.

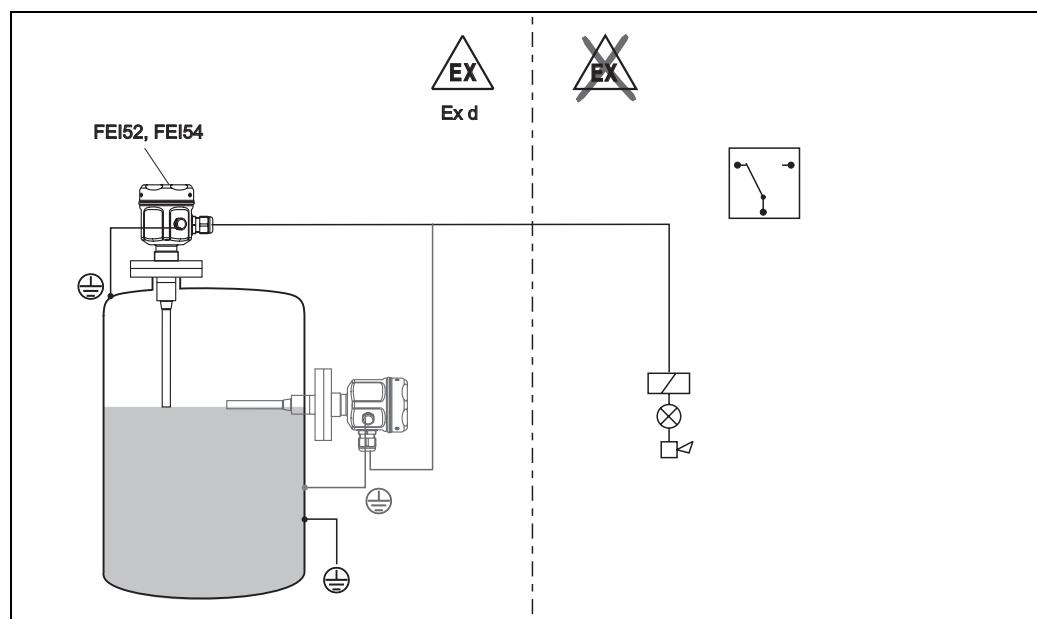

Measuring system

The make-up of the measuring system depends on the electronic insert selected.

Level limit switch

The compact measuring system consists of:

- the capacitive Liquicap M FTI51 or FTI52 level limit probe
- an FEI52, FEI54 electronic insert

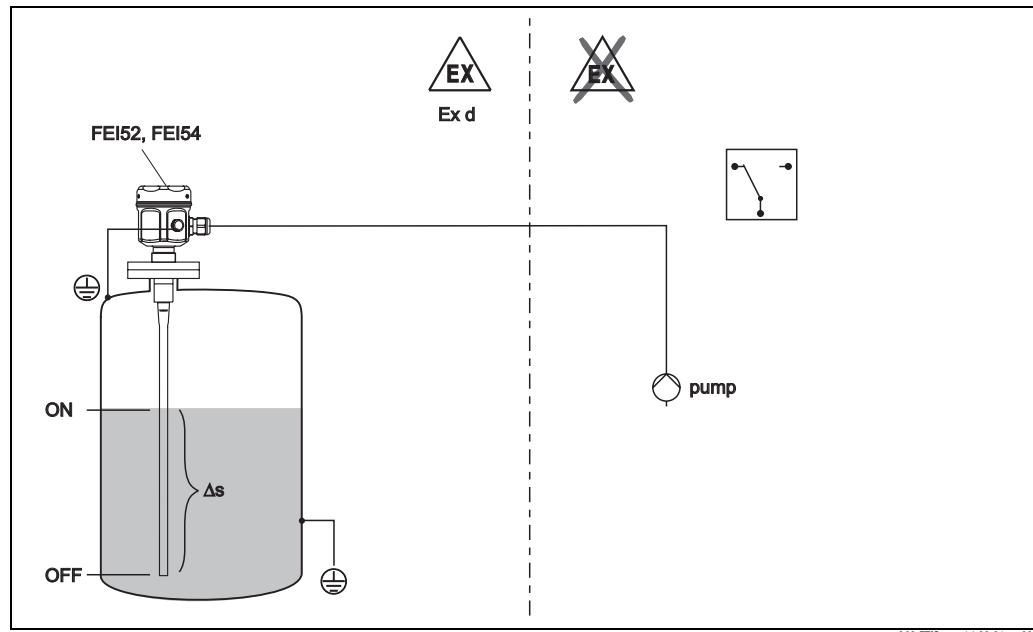

Pump control (Δs)

Note!

Only possible with a fully insulated probe.

L00-FTI5xxxx-14-00-06-en-004

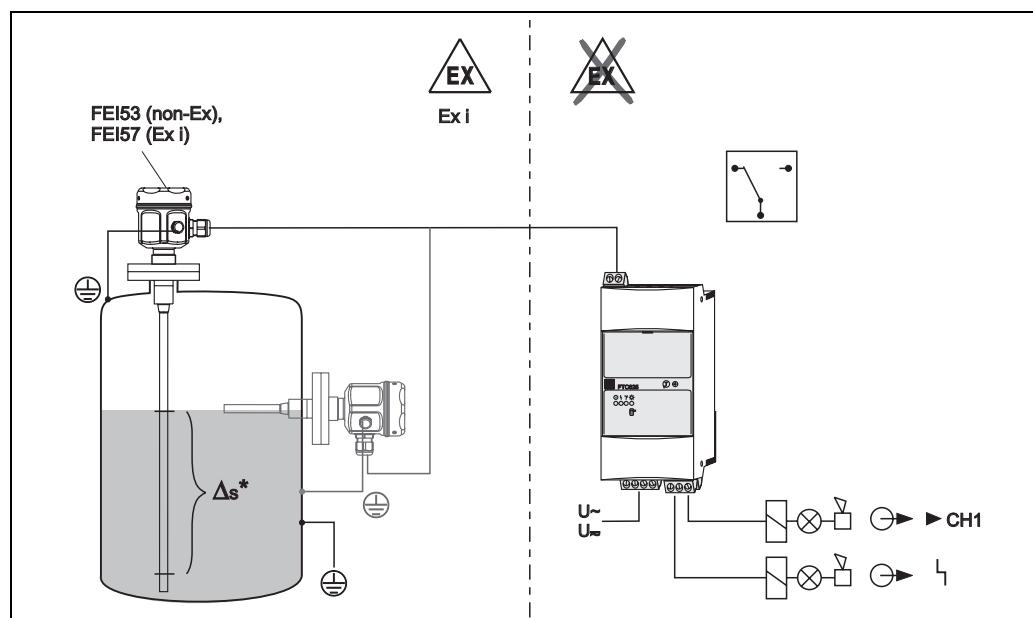

The level limit switch can also be used to control a pump, for example, where the switch-on and switch-off point can be freely defined.

Level limit sensor

Liquicap M FTI5x with electronic versions FEI53, FEI57S for connecting to a separate switching unit.

The complete measuring system consists of:

- the capacitive Liquicap M FTI51 or FTI52 level limit probe
- an FEI53, FEI57S electronic insert
- a transmitter power supply unit (e.g. FTC325, FTC625 (from SW V1.4), FTC470Z, FTC471Z)

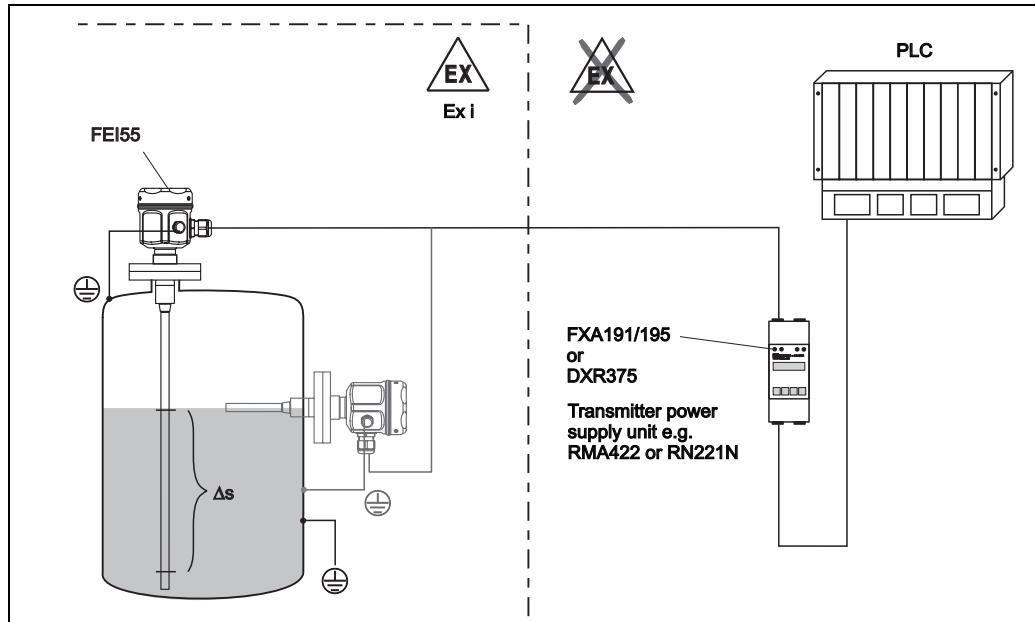

L00-FTI5xxxx-14-00-06-en-003

* only possible with FEI53

Level limit sensor 8/16 mA

The complete measuring system consists of:

- the capacitive Liquicap M FTI51 or FTI52 level probe
- the FEI55 electronic insert
- a transmitter power supply unit (e.g. RN221N, RNS221, RMA421, RMA422)

L00-FTI5xxxx-14-00-06-en-001

Electronic versions

FEI52

3-wire direct current version:

- Switch the load via the transistor (PNP) and separate supply voltage connection.
- Level limit adjustment directly at the level limit probe.

FEI53

3-wire direct current version with 3 to 12 V signal output:

- For separate switching unit Nivotester FTC325 3-WIRE.
- Level limit adjustment directly at the switching unit.

FEI54

Universal current version with relay output:

- Switch the loads via 2 floating changeover contacts (DPDT).
- Level limit adjustment directly at the level limit probe.

FEI55

Signal transmission 8/16 mA on two-wire cabling:

- For separate switching unit (e.g. RN221N, RNS221, RMA421, RMA422).
- Level limit adjustment directly at the level limit probe.

FEI57S

PFM signal transmission (current pulses are superimposed on the supply current):

- For separate switching unit with PFM signal transmission e.g. FTC325 PFM, FTC625 PFM and FTC47*Z
- Self-test from the switching unit without changing levels.
- Level limit adjustment directly at the switching unit.
- Cyclical checking from the switching unit.

Note!

For additional information see Page 23 ff.

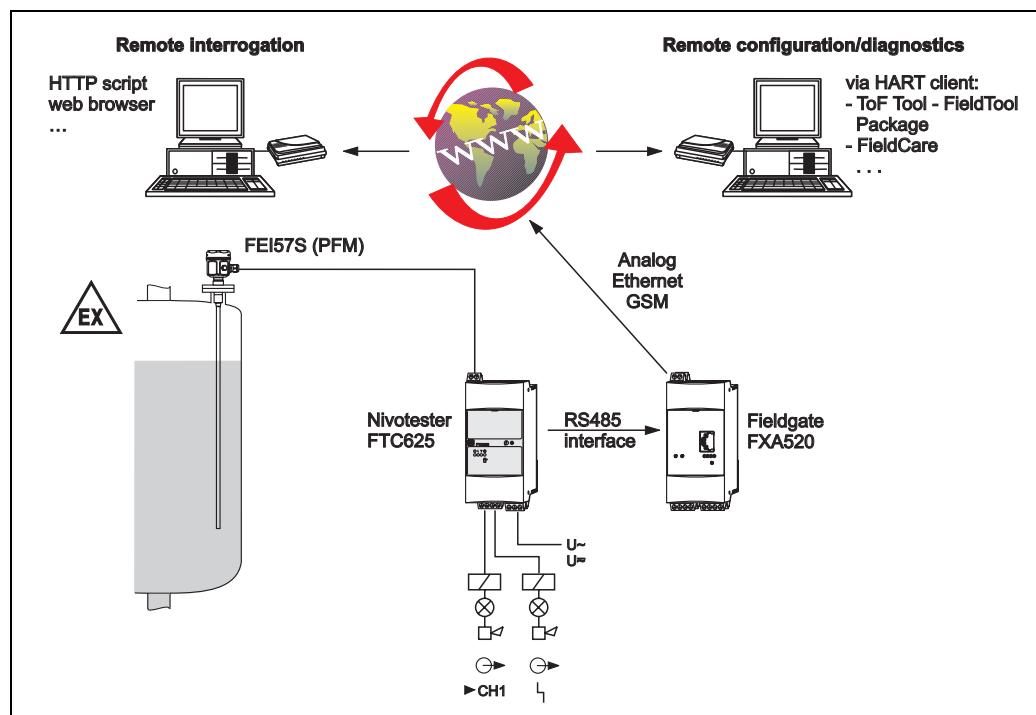

System integration via Fieldgate

Vendor managed inventory

The remote interrogation of tank or silo levels via Fieldgate enables suppliers of raw materials to gather information about the current inventories of their regular customers at any time and, for example, take this into account in their own production planning. The Fieldgate monitors the configured level limits and automatically triggers the next order as required. Here, the range of possibilities ranges from simple requisitioning by e-mail through to fully automatic order processing by incorporating XML data into the planning systems on both sides.

Remote maintenance of measuring systems

Not only does Fieldgate transmit the current measured values, it also alerts the standby personnel responsible by e-mail or SMS as required. Fieldgate forwards the information transparently. In this way, all options of the operating software in question are available remotely. By using remote diagnosis and remote configuration some onsite service operations can be avoided and all others can at least be planned and prepared better.

L00-FT15xxxx-14-00-06-en-002

Operating conditions: Installation

Installation instructions

Liquicap M FTI51 (rod probe) can be installed from above, from below and from the side.
Liquicap M FTI52 (rope probe) can be installed vertically from above.

Note!

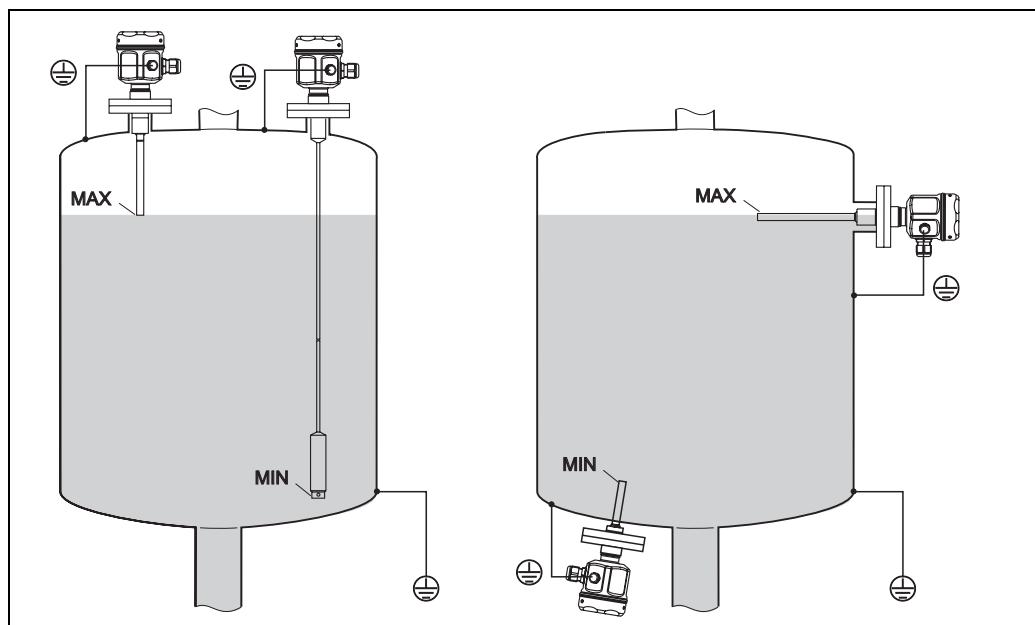

The probe may not come into contact with the container wall! Do not install probes in the area of the filling curtain!

Note!

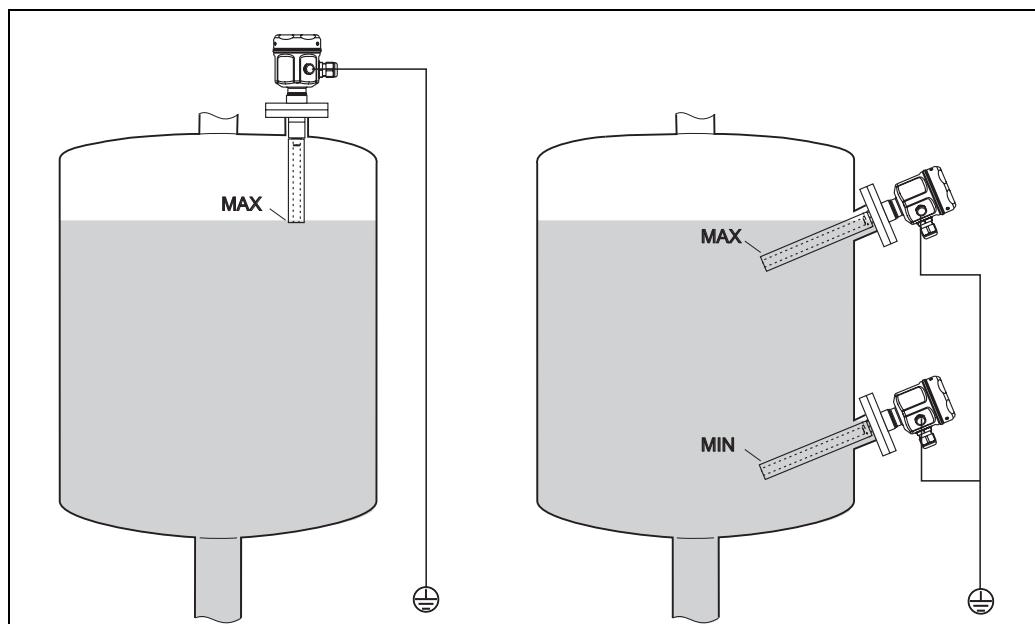

When using in agitating tanks, make sure you install at a safe distance from the agitator.
Rod probes with a ground tube should be used in the event of severe lateral load.

For containers that conduct electricity e.g. steel tanks

L00-FTI5xxxx-11-06-xx-xx-001

For containers that do not conduct electricity e.g. plastic tanks

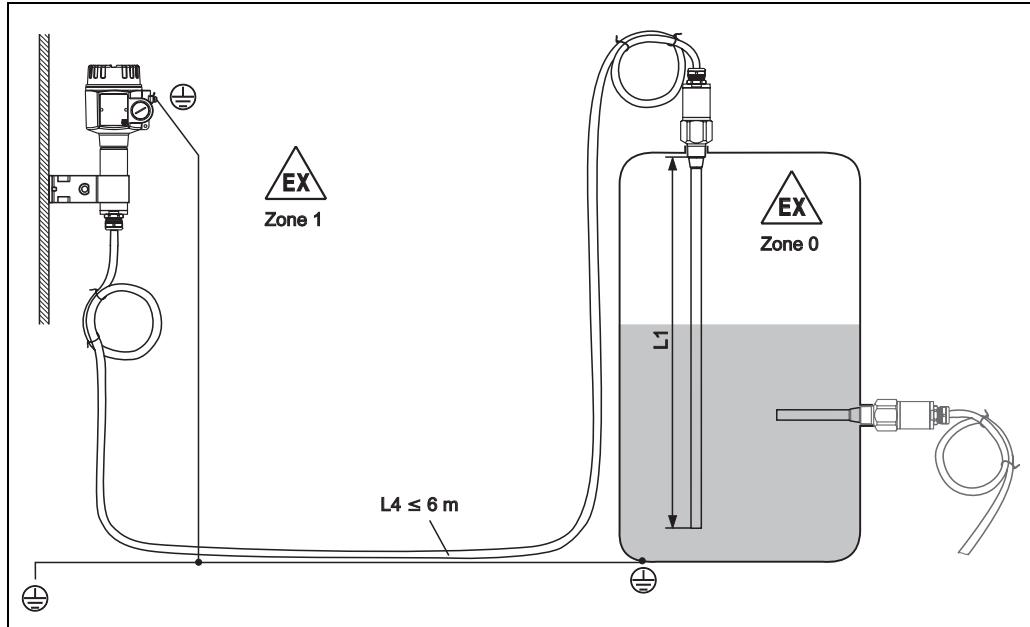

L00-FTI5xxxx-11-06-xx-xx-002

Probes with ground tube and grounding

With separate housing

For information on ordering, please refer also to the "Ordering information" => "Probe design" on Page 33 ff.

Rod length L_1 max. 4 m
Rope length L_1 max. 10 m

Note!

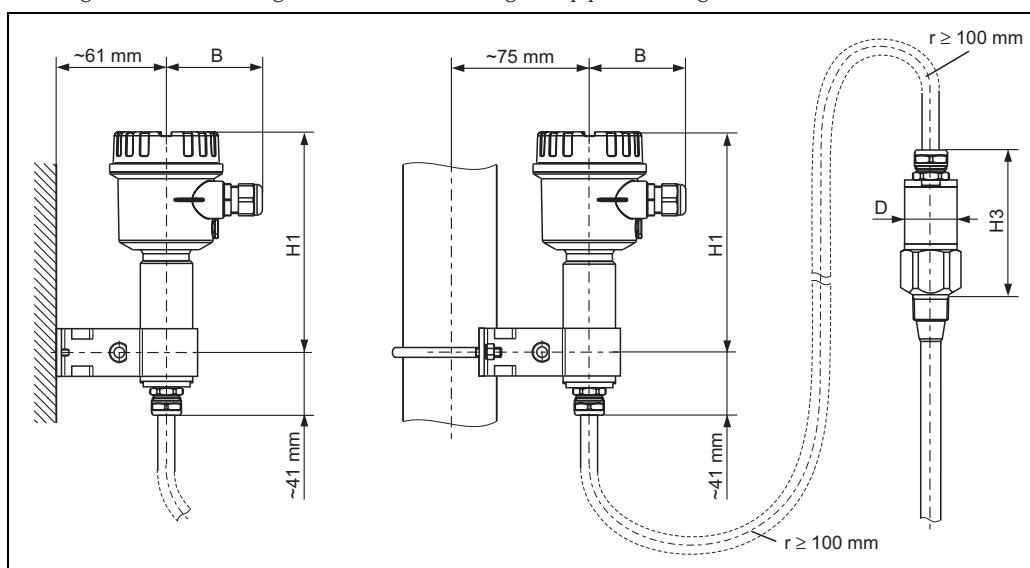

The maximum connection length between the probe and the separate housing is 6 m (L_4). The desired length must be quoted when ordering a Liquicap M with a separate housing.
If the connecting cable is to be shortened or guided through a wall, it has to be separated from the process connection. See "Documentation" => "Operating Instructions" on Page 42.

Extension heights

Housing side: wall mounting

Housing side: pipe mounting

Sensor side

Note!

The cable has a bending radius of $r \geq 100$ mm which may not be undershot!

| | Polyester housing (F16) | Stainless steel housing (F15) | Aluminum housing (F17) |
|---------|----------------------------|----------------------------------|---------------------------|
| B (mm) | 76 | 64 | 65 |

| G 1½, NPT 1½ | 100 | 130 |
| Tri-Clamp 1½ | 16 | 137 |
| Tri-Clamp 2 | 16 | 156 |

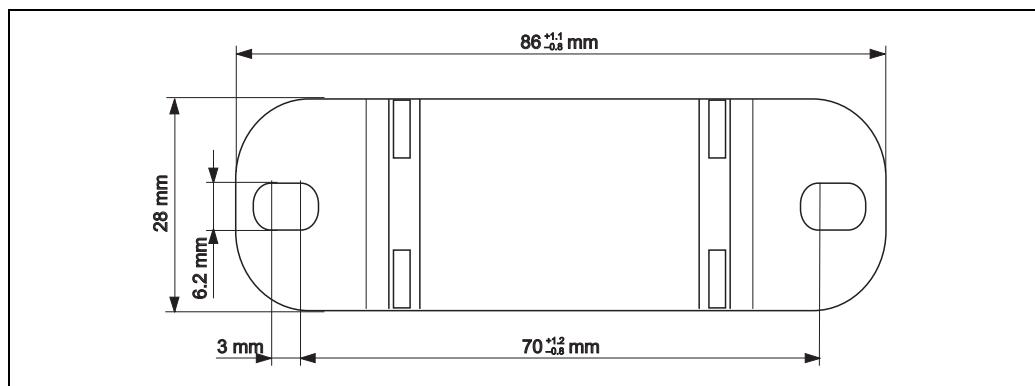

Note!

Connecting cable: ø10.5 mm

Outer jacket: silicone, mechanical resistance

Wall holder unit

L00-FM15xxxx-06-05-xx-xx-065

Note that the wall holder unit first has to be screwed to the separate housing before you can use it as a drilling template. The distance between the holes is reduced by screwing it to the separate housing.

Operating conditions: Environment

Ambient temperature range

- Ambient temperature of the transmitter: -50...+70 °C (observe derating; see Page 12 ff.)
- A weather protection cover should be used when operating outdoors in strong sunlight. For further information on the protective cover see Page 40.

Storage temperature

-50...+85 °C

Climate class

H2* = Thread height (important for calculating the exact probe length for process connections with G $\frac{1}{2}$, G $\frac{3}{4}$, G1, G1 $\frac{1}{2}$ thread.) Information on dimension H2 is provided on Page 17 ff. under Process connections → Thread → G → H2.

Length tolerance

Up to 1 m: 0 to 5 mm

Up to 3 m: 0 to 10 mm

Up to 6 m: 0 to 20 mm

Rope probes FTI52

Note!

- The active probe length is always fully insulated (dimension L1).
- Total length of probe from sealing surface: $L = L1 + L3$
- All rope probes are prepared for tensioning in containers (tensioning weight with anchor hole)
- Not suitable for agitator tanks, high-viscosity liquids and plastic tanks
- Thickness of rope insulation 0.75 mm

Input

| | |
|--------------------------|---|
| Measured variable | Level limit detection of change in capacitance between probe rod and container wall or ground tube, depending on the level of a liquid. |
|--------------------------|---|

| | |
|--|--|
| Measuring range (valid for all FEI5x) | <ul style="list-style-type: none"> ■ Measuring frequency: 500 kHz ■ Span: $\Delta C = 0$ to 1600 pF ■ Final capacitance: $C_E = \text{max. } 1600 \text{ pF}$ ■ Adjustable initial capacitance: $C_A = 0$ to 500 pF (range 1 = factory setting) $C_A = 0$ to 1600 pF (range 2) |
|--|--|

| | |
|---------------------|---|
| Input signal | Probe covered => high capacitance Probe not covered => low capacitance |
|---------------------|---|

| | |
|----------------------------|---|
| Measuring condition | <p>Notes!</p> <ul style="list-style-type: none"> ■ When installing in a nozzle, use inactive length (L3). ■ Probes with active build-up compensation must be used for high-viscosity liquids that tend to form build-up. ■ Fully insulated rod and rope probes can be used for pump control (ΔS operation). The switch-on and switch-off point are determined by the empty and full calibration. – The maximum length depends on the probe used. A 16 mm rod, for example, generates a capacitance of 380 pF/m in a conductive liquid. With a maximum span of 1600 pF, this gives $1600\text{pF}/380\text{pF} \text{ per m} = 4 \text{ m total length}$. See also Page 22 ("Technical data (probe)") ■ The minimum change in capacitance for level limit detection must be $\geq 5 \text{ pF}$. |
|----------------------------|---|

L00-FTI5xxxx-15-05-xx-xx-002

Output

| | |
|---------------------------|--|
| Galvanic isolation | FEI52: Between rod probe and power supply FEI54: Between rod probe, power supply and load FEI53, FEI55, FEI57S: See connected switching unit |
| Switch behavior | Binary or Δs operation (pump control) |
| Switch-on behavior | When the power supply is switched on, the switching status of the outputs corresponds to the signal on alarm. After max. 3 s the correct switching status is achieved. |
| Fail-safe mode | Minimum/maximum quiescent current safety can be switched at the electronic insert (for FEI53 and FEI57S only at Nivotester FTCxxx) MIN = minimum safety: The output switches safety-oriented when the probe is uncovered (signal on alarm). For use for dry running protection and pump protection for example MAX = maximum safety: The output switches safety-oriented when the probe is covered (signal on alarm). For use with overfill protection for example |
| Switching delay | At electronic inserts FEI52, FEI54, FEI55, the switching delay can be set in steps between 0.3 s and 10 s. At electronic inserts FEI53 and FEI57S, these settings are made at the additional Nivotester FTCxxx switching unit. |

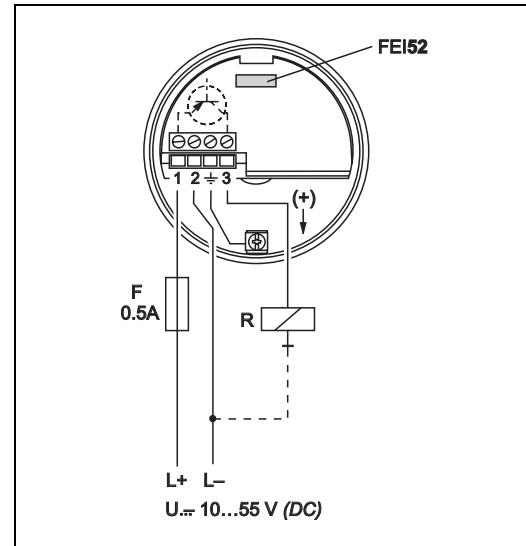

FEI52 electronic insert (DC PNP)

| | |
|---------------------|--|
| Power supply | DC voltage: 10...55 V Ripple: max. 1.7 V, 0...400 Hz Current consumption: < 20 mA Power consumption: max. 0.9 W Reverse polarity protection: yes Separation voltage: 3.7 kV FEI52 overvoltage protection: overvoltage category III |
|---------------------|--|

Electrical connection

Three-wire DC connection

Preferably used with programmable logic controllers (PLC),
DI modules as per EN 61131-2.
Positive signal at switch output of the electronics (PNP).

L00-FTI5xxxx-04-05-xx-xx-007

Output signal

| Safety mode | Level | Output signal | LEDs green red yellow |
|------------------------|-------|---------------------|--------------------------|
| MAX | | L_+ 1 → I_L → 3 | |
| | | 1 → I_R → 3 | |
| MIN | | L_+ 1 → I_L → 3 | |
| | | 1 → I_R → 3 | |
| Maintenance required * | | 1 → I_L / I_R → 3 | |
| Instrument failure | | 1 → I_R → 3 | |

I_L = Load current
(switched through)
 I_R = Residual current
(blocked)

- lit
- flashes
- unlit

L00-FTI5xxxx-04-05-xx-en-007 L00-FTI5xxxx-07-05-xx-xx-000

Signal on alarm

Output signal on power failure or in the event of device failure: $I_R < 100 \mu\text{A}$

Connectable load

- Load switched via transistor and separate PNP connection, max. 55 V
- Load current max. 350 mA (cyclical overload and short-circuit protection)
- Residual current $< 100 \mu\text{A}$ (with transistor blocked)
- Capacitive load max. 0.5 μF at 55 V, max. 1.0 μF at 24 V
- Residual voltage $< 3 \text{ V}$ (for transistor switched through)

FEI53 electronic insert (3-wire)

Power supply

DC voltage: 14.5 V
 Current consumption: < 15 mA
 Power consumption: max. 230 mW
 Reverse polarity protection: yes
 Separation voltage: 0.5 kV

Electrical connection

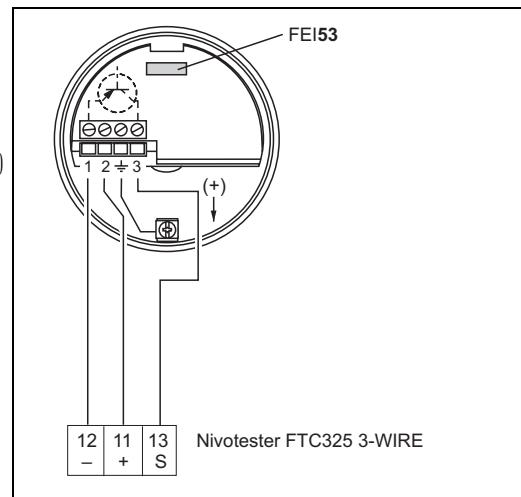

Three-wire DC connection

3...12 V signal

For connecting to the switching unit
 Nivotester FTC325 3-WIRE from Endress+Hauser.

Switchover of minimum (MIN) and maximum (MAX)
 safety in Nivotester FTC325 3-WIRE.

Level limit adjustment directly at the Nivotester.

L00-FTI5xxxx-04-05-xx-xx-003

Output signal

| Mode | Output signal | LEDs green red |

Signal on alarm

< 2.7 V

Connectable load

- Floating relay contacts in the connected switching unit Nivotester FTC325 3-WIRE
- For contact load see the Technical Data of the switching unit

FEI54 electronic insert (AC/DC with relay output)

Power supply

Alternating voltage 19...253 V, 50/60 Hz or DC voltage: 19...55 V
 Power consumption: max. 1.5 W
 Reverse polarity protection: yes
 Separation voltage: 3.7 kV
 FEI54 overvoltage protection: overvoltage category III

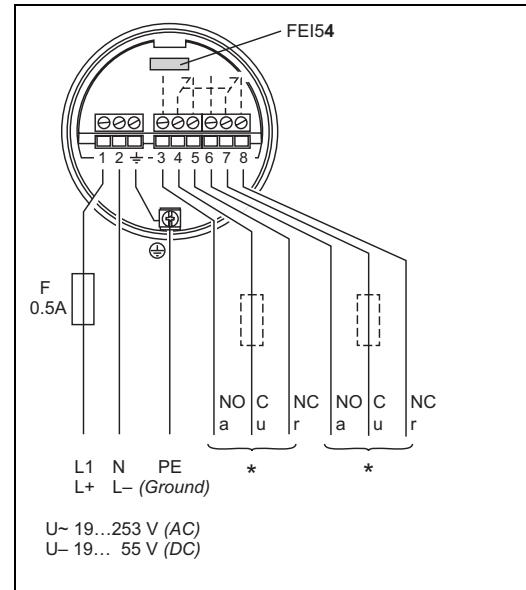

Electrical connection

Universal current connection with relay output (DPDT)

Power supply:
 Please note the different
 voltage ranges for AC and DC.
 Alternating current.

Output:
 When connecting an instrument with
 high inductance, provide a spark arrester
 to protect the relay contact.
 A fine-wire fuse (depending on the
 load connected) protects the relay
 contact on short-circuiting.
 Both relay contacts switch simultaneously.

* See below "Connectable load"

unlit

Signal on alarm

Output signal on power failure or in the event of device failure: relay de-energized

Connectable load

- Loads switched via 2 floating changeover contacts (DPDT)
- I~ max. 6 A (EEx d 4 A), U~ max. 253 V; P~ max. 1500 VA at $\cos \varphi = 1$, P~ max. 750 VA at $\cos \varphi > 0.7$
- I- max. 6 A (EEx d 4 A) to 30 V, I- max. 0.2 A to 125 V
- The following applies when connecting a functional low-voltage circuit with double isolation as per IEC 1010: Sum of voltages of relay output and power supply max. 300 V

FEI55 electronic insert (8/16 mA)

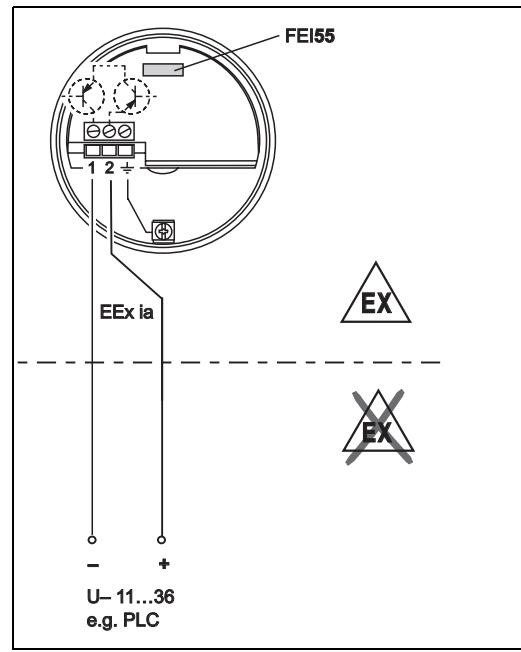

Power supply

DC voltage: 11...36 V
 Power consumption: < 600 mW
 Reverse polarity protection: yes
 Separation voltage: 0.5 kV

Electrical connection

Two-wire connection for separate switching unit

For connecting to programmable logic controllers (PLC) for example,
 AI module 4 to 20 mA to EN 61131-2.
 Output signal jump from high to low current on limit.

L00-FTI5xxxx-04-05-xx-en-000

Output signal

| Safety mode | Level | Output signal | LEDs green red yellow |

Certificates and approvals

CE mark

The devices are designed to meet state-of-the-art safety requirements, have been tested and left the factory in a condition in which they are safe to operate. The devices comply with the applicable standards and regulations that are listed in the EC Declaration of Conformity and thus meet the legal requirements of the EC Directives. Endress+Hauser confirms that the device has been tested successfully and the conformity of the device by affixing to it the CE-mark.

Ex approval

See "Ordering information" from Page 33

| Y | Special version, to be specified | | | | | | |
| FT151 Product designation | | | | | | | |

* With this option, the complete device is cleaned for applications free from paint-wetting impairment substances.

** With this option, the surface of the probe rod (316L) is passivated and acts as additional corrosion protection.

Accessories

| | |
|---|--|
| Protective cover | For F13 and F17 housing Order number: TSP17090 |
| Shortening kit for FTI52 | Order number: 942901-0001 |
| HAW569 surge arrester for FEI55 and FEI57S | <p>Order number:</p> <ul style="list-style-type: none"> ■ HAW569-A11A (non-hazardous) ■ HAW569-B11A (hazardous area) <p>Note!</p>  <p>Both these versions can be screwed directly into the housing (M20x1.5).</p> <p>Surge arrester for limiting overvoltage in signal lines and components. The HAW562Z module can be used in hazardous areas.</p>  <p>L00-FM15xxxx-03-05-xx-xx-009</p> |
| Universal weld-in adapter | <ul style="list-style-type: none"> ■ Order number: 52006262 Diameter D: 85 mm Height H: 12 mm ■ Order number: 214880-0002 Diameter D: 65 mm Height H: 8 mm <p>With process connection UPJ (adapter 44 mm) Material: 1.4435/SS316L Replacement seal: Silicon O-ring (Set with 5 pieces - FDA-listed) Order number: 52023572</p>  <p>L00-FM15xxxx-06-05-xx-en-012</p> |
| Weld-in adapter G ¾ | <p>Order number: 52018765 For flush-mounted Liquicap M installation with process connection GQJ (seal included in scope of delivery)</p> <p>Material: corrosion-resistant steel 1.4435 (AISI 316L) Weight: 0.13 kg Replacement seal: Silicon O-ring (Set with 5 pieces - FDA-listed) Order number: 52021717</p> <p>Max. 25 bar / max. 150 °C</p>  <p>L00-FTL5xxxx-06-05-xx-xx-020</p> |

Weld-in adapter G 1

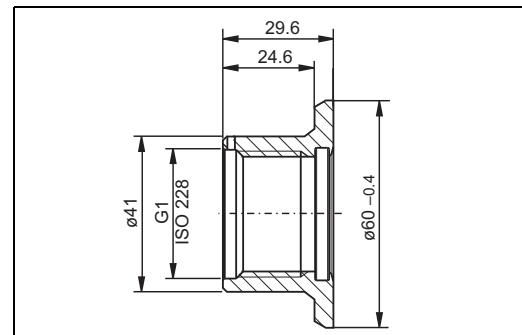

Order number: 52001051
with 3.1.B material certificate: 52011896
For flush-mounted Liquicap M installation
with process connection GWJ
(seal included in scope of delivery)

Material: corrosion-resistant steel
1.4435 (AISI 316L)

Weight: 0.19 kg

Replacement seal:
Silicon O-ring (Set with 5 pieces - FDA-listed)
Order number: 52014472

Max. 25 bar / max. 150 °C

L00-FTL5xxxx-06-05-xx-xx-020

Spare parts**Electronic insert**

- FEI52 electronic insert
71025819
- FEI53 electronic insert
71025820
- FEI54 electronic insert
71025814
- FEI55 electronic insert
71025815
- FEI57S electronic insert
71025816

Cover for housing

- Cover for aluminum housing F13: gray with sealing ring
52002698
- Cover for stainless steel housing F15: with sealing ring
52027000
- Cover for stainless steel housing F15: with clasp and sealing ring
52028268
- Cover for polyester housing (F16), transparent plastic with seal
52025790
- Cover for polyester housing F16, flat: gray with sealing ring
52025606
- Cover for aluminum housing F17, flat: with sealing ring
52002699
- Cover for aluminum housing T13, flat: gray with sealing ring/electronics compartment
52006903
- Cover for aluminum housing T13, flat: gray with sealing ring/connection compartment
52007103

Seal set for stainless steel housing

- Seal set for stainless steel housing F15: with 5 sealing rings
52028179
