

Energy measuring devices

multimes

Monitoring

Recording

The energy measuring devices **multimes** provide an extensive overview of all important electrical parameters in energy distribution facilities. A convenient user guidance makes operation simple and bright displays enable the relevant network parameters to be optimally read.

multimess basic/comfort 144 LCD bus

With large, high-contrast LC display for measured value and text display, bus-capable.

multimess light/basic 96 LED

Ideal for use in low-voltage energy distributions. Optionally bus capable.

multimess eco 144 LED

The low-cost alternative to standard analog instruments.

multimess light 144 LED

multimess basic/comfort 144 LED bus

Different performance classes for every field of application.

(H x W x D in mm) **96 x 96 x 92**

Data display **LED**

Interface * **KBR eBus**

* for multimes light 96 LED optionally through upgrade kit

3-phase network measuring instrument

Highlights

- Ideal for use in low-voltage power distributions
- Compact construction, standard installation size 96 x 96 mm
- Display neutral conductor current
- Active energy meter for energy consumption
- Bright LED displays for optimal readability

An overall view of **technical details** can be found on pages 34/35.
The **housing dimensions** are listed on pages 38/39.

multimes light / basic 96 LED is a compact network measuring device for use in low-voltage power distribution facilities and serves to measure all important parameters in 3 and 4-phase networks. Apart from reactive power meters for energy consumption, the multimes light / basic 96 LED has an extreme value memory, as well as a relay with touch-up function. Three bright LED displays guarantee optimal readability, even in poor light conditions. For the

bus capable version of multimes light / basic 96 LED, other measurement parameters can be read out in addition to the measured values displayed on the device – such as the inductive reactive power meter.

Note: You can upgrade the non bus capable version of multimes light / basic 96 LED later on without any problems, using a special **upgrade kit**.

multimessexco 144 LED

Housing size
(H x W x D in mm) **144 x 144 x 60**

Data display **LED**

3-phase network measuring instrument

- Highlights**
- Cost-effective alternative to standard analog instruments
 - Large, bright LED displays for optimal readability
 - Flexible use for low and medium-voltage facilities through switchable measuring ranges for U and I
 - Display neutral conductor current
 - Small mounting depth of only 60 mm

An overall view of **technical details** can be found on page 35.
The **housing dimensions** are listed on page 39.

multimessexco 144 LED is an affordable network measuring device for flush mounting, for the measurement of all important values in 3-phase networks. Because of its convincing price-performance ratio, the device represents a real alternative to the analog measuring devices used in energy distribution.

The device has an extreme value memory which saves, similar to a maximum indicator function, both a minimum and a maximum value for each measured value. The proven installation size of 144 x 144 mm and the large LED displays guarantee an optimal readability.

multimes light 144 LED

Housing size
(H x W x D in mm) **144 x 144 x 60**

Data display **LED**

3-phase network measuring instrument

- Highlights**
- Use in low and medium-voltage facilities through switchable measuring ranges for U and I
 - Large, bright LED displays for optimal readability
 - Extensive displays, functions and storage options
 - Small mounting depth of only 60 mm

An overall view of **technical details** can be found on page 35.
The **housing dimensions** are listed on page 39.

multimes light 144 LED is a device in the lower price range and is suitable for measuring and monitoring all relevant measurement parameters in a 3-phase network. The device can be configured via a serial RS485 interface. multimes light 144 LED is equipped with an active and reactive energy meter for positive energy, as well as

an extreme value memory for all measured values. The measured values are displayed on three large and bright LED displays. In addition, the phase field display is possible in degrees, dimension and text displays are possible via 4-digit segment displays.

3-phase network measuring instrument

- Highlights**
- Many performance classes for each field of application
 - Extensive displays, functions and storage options
 - Optimal readability due to bright LED displays
 - Wide variety range of inputs and outputs (digital/analog)
 - Small mounting depth of only 60 mm

An overall view of **technical details** can be found on pages 36/37.
The **housing dimensions** are listed on page 39.

The electronic network measuring devices of the **multimes basic/comfort 144 LED** series measure and monitor all important parameters in 3-phase networks and are available in a wide range of performance classes. Saving the load profile of the facility measured at a 15-minute measuring interval is, depending on the varia-

tion, possible up to 365 days. The integrated event memory can log up to 4096 events, such as limiting value violations, mains failures, drops in voltage and many other values. A bus capability of non-bus capable devices can be implemented at a later date by means of an upgrade kit.

3-phase network measuring instrument

- Highlights**
- Many performance classes for each field of application
 - Extensive displays, functions and storage options
 - Large LCD display for measured value and text displays
 - Wide variety range of inputs and outputs (digital/analog)
 - Small mounting depth of only 60 mm

An overall view of **technical details** can be found on page 37.
The **housing dimensions** are listed on page 39.

The electronic network measuring devices **multimes basic/comfort 144 LCD bus** are used to measure and monitor all important measuring parameters in 3-phase networks. They replace all analog instruments used in conventional low-voltage distribution systems and also provide a variety of additional functions. The large, high-contrast LC display is optimally readable and easy to handle with its interactive user guidance as a combination of value and text displays.

multimes basic/comfort 144 LCD bus offers a large range of functions. Extensive measured value displays, load profile or event memories are all available in the basic version. Recording measured data for energy consumption and recovery, sending specific parameters to analog outputs, a larger memory, as well as a more flexible use of the integrated digital inputs and outputs, is reserved for the larger models.
