ET 200S

Analog electronics modules

Overview

- Analog inputs and outputs for the ET 200S
- Can be connected to the TM-E terminal module with automatic coding
- High-feature versions with enhanced accuracy and resolution
 - 2 AI RTD High Feature
- High-speed versions for high-speed analog value acquisition
 - 2 AI High Speed with enhanced characteristics
- Module replacement during operation and when live (hot swapping)

Note:

For selection of suitable TM-E terminal modules, please use the configuring tools.

Overview

- Positioning module 1 POS U is a single-channel positioning module for ET 200S for the positioning of positioning and operational axes
- For controlled positioning using digital outputs according to the rapid/creep feed principle
- With actual position value sensing for
 - Incremental encoders with 5 V difference signals or 24 V signals, or for SSI encoders
 - Proportioning mode
(single evaluation of encoder signal A only)
- Reference-point approach, actual value setting
- Parameter change during operation
 - Reversing difference
 - Shutdown difference
- Functions
 - Inchng:
Direct application of control signals by the master
 - Traversing:
Absolute or relative
 - Axes:
For linear and rotary axes
 - Latch function:
Saves the current value by setting a digital input

Note

Siemens is offering position measuring systems and pre-assembled connecting cables for counting and positioning functions under SIMODRIVE Sensor or Motion Connect 500.

ET 200S – Technology modules

1 POS U positioning module

Technical specifications

1 POS U positioning module	6ES7 138-4DL00-0AB0
Voltages and currents	
Load voltage L+	
- Rated value (DC)	24 V
- Reverse polarity protection	Yes
- permissible range, lower limit (DC)	20.4 V
- permissible range, upper limit (DC)	28.8 V
Current consumption	
• from load voltage L+ (no load), max.	50 mA
• from backplane bus 5 V DC, max.	10 mA
• Power dissipation, typ.	2 W
Digital inputs	
Length of cable	
- Length of cable unshielded, max	50 m
• Input characteristic to comply with IEC 1131, Type 2	Yes
Input voltage	
- Rated value, DC	24 V
- for signal 0	-30 V to 5 V
- for signal 1	11 V to 30 V
Input current	
- for 0 signal, max (permissible closed-circuit current)	2 mA
- for 1 signal, typical	9 mA
Digital outputs	
• Length of cable shielded, max.	1,000 m
• Length of cable unshielded, max.	600 m
• Short-circuit protection of the output	
- response threshold, typ.	Yes
0.7 A to 1.8 A	
• Restriction of the inductive transient voltage to	Yes; L+ -(55 ... 60 V)
• Lamp load, max.	5 W
• Driving a digital input	Yes
Output voltage	
- Rated value (DC)	24 V
- for 0 signal (DC), max.	3 V
- for signal 1, min.	L+ -1 V
Output current	
- for 1 signal permissible range for 0 to 60 °C, min.	7 mA
- for 1 signal permissible range for 0 to 60 °C, max.	600 mA
- for 0 signal residual current, max.	0.3 mA
Switching frequency	
- at resistive load, max.	100 Hz
- at inductive load, max.	2 Hz
- at lamp load, max.	10 Hz

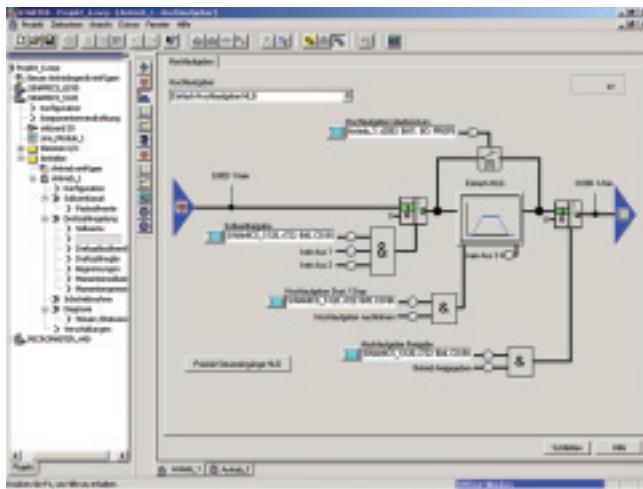

1 POS U positioning module	6ES7 138-4DL00-0AB0
Sensor supply	
5 V - sensor supply	
- 5 V	Yes
- Short-circuit protection	Yes
- Output current, max.	500 mA
24 V - sensor supply	
- 24 V	Yes
- Short-circuit protection	Yes
- Output current, max.	500 mA
Absolute encoder (SSI) - sensor supply	
- Absolute encoder (SSI)	Yes
- Output voltage	L+ -0.8 V
- Output current, max.	500 mA
- Short-circuit protection	Yes
Sensor	
Connectable encoders	
- Absolute encoder (SSI)	Yes
- 2-wire BEROS	Yes; Type 2
Incremental encoder (symmetrical)	
• Encoder signal 5 V	
- signal level	according to RS 422
Absolute encoder (SSI)	
• Updating of the encoder value	
- Monoflop time	64 ms
Status information/ interrupts/diagnostics	
Diagnostic display LED	
- Actual value decreasing DN (green)	Yes
- Actual value increasing UP (green)	Yes
- Positioning mode POS (green)	Yes
- Group fault SF (red)	Yes
- Status display digital input (green)	Yes
Potentials/ electrical isolation	
• between backplane bus and all other circuit components	Yes
• between the channels and the backplane bus	Yes
Dimensions and weight	
• Weight, approx.	65 g
• Width	30 mm
• Height	81 mm
• Depth	52 mm

Ordering data Order No.

Single-channel positioning module for ET 200S for positioning the adjustment and operation axes	

STARTER drive/commissioning software

Overview

The easy-to-use STARTER drive/commissioning software can be used to

- start up,
 - optimize and
 - diagnose.

This software can be operated either as a stand-alone PC application or can be integrated into the SCOUT engineering system (SIMOTION). The basic functions and handling are the same in both cases.

In addition to the SINAMICS drives, the current version of STARTER also supports MICROMASTER 4 drives and frequency converters for the decentralized SIMATIC ET 200S FC periphery.

The project wizards can be used to create the drives within the structure of the project tree.

First-time users are supported by a solution-based dialog menu, with a standard graphics-based display maximizing clarity when setting the drive parameters.

First commissioning is guided by wizards, which make all the basic settings in the drive. This enables a drive to be up and running after only setting a small number of parameters within the drive configuration process.

The individual settings required are made using graphics-based parameterization screenforms, which also display the mode of operation.

Examples of individual settings that can be made include:

- terminals
 - bus interface
 - setpoint channel (e.g. fixed setpoints)
 - speed control (e.g. ramp-function generator, limits)
 - BICO interconnections
 - diagnostics

Experts can gain rapid access to the individual parameters via the Expert List and do not have to navigate dialogs. In addition, the following functions are available for optimization purposes:

- self-optimization
 - trace

Diagnostics functions provide information about:

- control/status words
 - parameter status
 - operating conditions
 - communication states

Performance

- Easy to use: only a small number of settings need to be made for successful first commissioning: axis turning
 - Solution-based dialog-based user guidance simplifies commissioning.
 - Self-optimization functions reduce manual effort for optimization.
 - The built-in trace function provides optimum support during commissioning, optimization and troubleshooting.

Minimum hardware and software requirements

- PG or PC with PentiumTM II 400 MHz (WindowsTM NT/2000)
 - PentiumTM III 500 MHz (WindowsTM XP)
 - 256 MB RAM
 - Monitor resolution 1024 x 768 pixels
 - WindowsTM NT 4.0 SP6, 2000 SP3, XP Professional SP1
 - Microsoft Internet Explorer 5.01

For the communication between PG/PC and the Control Unit CU320 a PROFIBUS communication module and a connection cable are required.

E. g. PROFIBUS CP 5512 communications module
(PCMCIA card, type 2 + adapter with 9-pole SUB-D socket for connection to PROFIBUS)

For MS Windows 2000/XP Professional and PCMCIA 32)
Order No.: 6GK1551-2AA00
and connection cable between CP 5512 and PROFIBUS

SIMATIC ET 200 distributed I/Os

ET 200iSP

Introduction

Overview

- Modular distributed I/O system with degree of protection IP30
- Suitable for use in potentially explosive atmospheres Zone 1
- Increased-safety type according to CENELEC: II 2 G (1) GD EEx d e [ib/ia] IIC T4
- Design and version according to ATEX 100 a
- Connection of intrinsically safe signals for gas (from Zone 2, 1 or 0)
- Connection of intrinsically safe signals for dust (from Zone 20, 21 or 22)
- Intrinsically safe design of electronic modules
- Intrinsically safe PROFIBUS connection
- Redundant configuration of PROFIBUS interface and power supply also possible
- Online expansion and reparameterization in the SIMATIC environment
- Firmware update over the bus
- Better information is now available about the modules thanks to the I&M data stored on each module (Information & Maintenance data)
- Acquisition of count pulses and acquisition of frequencies
- Replacement of all electronic modules (as well as power supply and bus connection modules) when live during runtime and under hazardous conditions in zone 1 (hot swapping)
- Function orientated station design with up to 32 electronic modules per station
- Optimum integration of HART field devices (HART transparency)
- Powerfail-proof storage of manufacturer and user data on the electronic modules
- All information/data required for operation/ startup run(s) through PROFIBUS, no service bus required
- Better diagnosis options and shorter commissioning times in comparison to conventional design
- Optimized for operation with PCS 7, open for operation with other process control systems
- No tools required to replace modules
- Hard-wired
- Spring-loaded or screw-type connection system for connection of sensors available
- Mechanically coded electronic modules

Application

The ET200iSP distributed I/O system has degree of protection IP30.

It is used wherever explosion protection for gases and dusts is required in compliance with CENELEC: II 2 G (1) GD EEx d e [ib/ia] IIC T4.

The ET200iSP system has been designed in accordance with the 94/9/EG guideline which must be complied with when new devices for potentially explosive atmospheres are introduced onto the European market.

The design of the system allows it to be used under high mechanical loads i.e. on oil platforms.

The system consists of terminal modules to which the corresponding functional units such as the power supply, interface module and electronic modules are connected.

This modular design ensures optimal adaptation to the plant-specific installation requirements in potentially explosive atmospheres. This ensures fast hot-swapping of individual functional units. In the case of a fault, only small parts of the plant are affected since only a few channels are processed in a module.

Using an ET200iSP station can save significant costs compared with a conventional design. Isolating stages and sub-distribution boards are no longer required and the cabling outlay is reduced since the station functions in a similar way to a local modular terminal. Commissioning and troubleshooting are simplified by the comprehensive diagnosis options.

In addition to the analog input modules and analog output modules with and without HART functionality, the existing product range of I/O modules also includes digital I/O modules whose functionalities are configurable.

The system has been designed to function optimally with SIMATIC S7 and SIMATIC PCS 7. It can also be used with other process control systems and SIMATIC S5 via an interface using a GSD file.

Design

A distributed I/O station (= Remote I/O) ET 200iSP comprises:

- A terminal module for the power supply unit as well as the associated power supply module to the EX d degree of protection (flameproof enclosure)
- A terminal module for the PROFIBUS interface as well as the associated IM 152 interface module
In the case of a single PROFIBUS interface, another slot is available on the terminal module for an electronics module.
If the PROFIBUS interface is implemented redundantly, a terminal module is available that can carry two IM 152 modules.
- Up to 32 terminal modules for the electronics modules as well as the digital and analog electronics modules that can be plugged into them. One terminal module can accept up to 2 electronics modules.
- One terminating module that is included in the scope of supply of the IM 152.

The stations are connected together on an S7-300 rail in accordance with the above list starting with the terminal module of the power supply unit, followed by the terminal module for the PROFIBUS interface followed by the required terminal modules for the electronics modules.

When the terminal modules are mounted, the wiring can be completed and tested without the need for electronics modules.

The appropriate electronics modules are plugged onto the terminal modules.

The inserted electronics modules are mechanically coded initially to prevent inadvertent swapping later.

No tools are required for mounting the terminal modules and electronics modules.

The maximum configuration is limited by the 32 electronics modules, which corresponds to a maximum station length of 107 cm.

The maximum possible number of modules can be limited as a result of the power consumption of the modules used. Up to 16 modules can be used without constraints, for a larger number, the planning rules must be taken into account.

PROFIBUS must be routed intrinsically safe into the hazardous area through a suitable fieldbus isolating transformer (RS 485IS coupler).

The 24 V connection to the power supply terminal is routed through EX e terminals. This connection is not permitted to be removed under Ex conditions. The feeder power supply must be installed in the safe area.

Installation in an EX e housing with at least degree of protection IP54 is a requirement for use in explosion-hazard areas.

Accessories:

The following accessories are available for the ET 200iSP:

- Pre-perforated DIN A4 labeling sheets for electronic modules in various colors, machine-printable
- Slot number plate for identification of terminal modules

SIMATIC ET 200 distributed I/Os

ET 200iSP

Introduction

Function

Operating mode

Through PROFIBUS DP (up to 1.5 Mbit/s), a central PLC can access the electronic modules of the ET 200iSP station just like a central I/O module. Communication is handled by the master interface in the central PLC and the interface module of the ET 200iSP (= IM 152-1). The diagnostics integrated in the system reduce startup and debugging times.

The physical bus setup for devices in hazardous areas requires special protective measures. The method of the intrinsically safe PROFIBUS has been selected for ET 200iSP. This demands segmentation and power limiting on the bus (PROFIBUS RS 485-IS).

A commercially available "Fieldbus isolating transformer" (RS 485IS coupler) is used for this purpose. It can be installed in areas up to Zone 2. This converts the PROFIBUS DP to an intrinsically safe PROFIBUS RS 485-IS, which allows modules to be plugged and pulled – even under potentially explosive conditions.

Configuration

An ET 200iSP station can be connected to higher level PLCs as a DP V0 or DP V1 slave.

In an S7/PCS7 environment, configuration and parameterization of an ET 200iSP station is executed using SIMATIC STEP7 hardware manager. This defines the station design (which module where).

This software is opened by double-clicking one of the implemented modules/stations.

Software requirements

- SIMATIC STEP 7, Version 5.3 + SP1 incl. Hardware Support Package (HSP)
- SIMATIC PCS 7, Version V6.1
- For configuring HART field devices, the current version of the PDM configuring software is required.

Configuring in non-Siemens systems and older PCS 7/STEP 7 versions

In all other applications, the configuration of the station must be relayed to the PROFIBUS DP network through the GSD file.

In this case, parameterization is carried out through PDM, whereby a comparison of the configuration between PDM and GSD file is not possible. It is not possible to commission an ET 200iSP without the PDM configuration software.

The parameters of this module can then be defined in the PDM dialog fields, such as alarm limits for analog modules, sensor selection for digital modules, settings for the release of analog values and the output of HART commands for analog HART modules.

Technical specifications – general

Degree of protection	IP30
Ambient temperature	- 20 °C to + 70 °C
Vibration-proof	permanent: 0.5 g, intermittent: 1 g

Standards and approvals

• PROFIBUS	EN 50170, Volume 2
• EU directive	94/9/EC (ATEX 100a)
• CENELEC	II 2 G (1) GD EEx d e [ib/ia] IIC T4
• IEC	IEC 61131, Part 2
• CE	According to 89/336/EEC and 73/23/EEC

Overview

- The IM 152 interface module is plugged onto the corresponding terminal module TM-IM/EM (to be ordered separately). For redundant operation, two IM 152 are used. They are plugged onto the TM-IM/IM.
- The interface module IM 152 has the following properties:
 - Connects the ET 200iSP to PROFIBUS DP
 - Prepares data for the fitted electronic modules
 - The PROFIBUS address of ET 200iSP can be adjusted by switch
 - Slot for MMC
 - Firmware updating over PROFIBUS DP or MMC
- Shutting down the 24 V DC supply voltage at the terminal module TM-PS also shuts down the interface module IM 152.
- The maximum address size is 244 byte inputs and 244 byte outputs.

1) The ET 200iSP components must be ordered separately
A) Subject to export regulations: AL: N and ECCN: EAR99H

Overview

- The electronic modules are plugged into the associated terminal modules that must be ordered separately (with screw-type or spring-loaded terminals).
- When plugged in, the modules are automatically uniquely coded mechanically.
- Modules can be replaced under potentially explosive conditions during runtime.

Technical specifications

Digital input module	6ES7 131-7RF00-0AB0
Digital inputs	
• Number of NAMUR inputs	8
Length of cable	
- Length of cable shielded, max	200 m
Input delay (at rated value of the input voltage)	
• For standard inputs	
- at 0 to 1, min.	2.8 µs
- at 0 to 1, max.	3.5 µs
- at 1 to 0, min	2.8 ms
- at 1 to 0, max.	3.5 µs
Sensor	
• Number of sensors that can be connected, max.	8
Connectable encoders	
- NAMUR sensor	Yes
NAMUR sensor	
- Input current, for 0 signal, max.	1.2 mA
- Input current, for 1 signal, min.	2.1 mA
Integral functions	
• Frequency sensor	Yes
• Frequency measurement	Yes; (gate time) 50ms; 200ms; 1s
• Number of frequency sensors	2
Counter	
• Number of counter inputs	2; normal and periodic counting function
• Input frequency, max.	5 kHz; for cable length 20 m 5 kHz; for cable length 100 m 1 kHz; for cable length 200 m 500 Hz
Status information/ interrupts/ diagnostics	
Interrupts	
- Diagnostic interrupt	Yes; with parameter assignment
- Process interrupt	No
Diagnostics	
- Diagnostic functions	Yes
- Diagnostic information can be read out	Yes
- Short circuit	Yes; R load < 150 Ohms with NAMUR encoder/encoder and NAMUR changeover contact /encoder to DIN 19234
Diagnostic display LED	
- Group fault SF (red)	Yes
Galvanic isolation	
Digital input functions	
- between the channels	No
- between the channels and the backplane bus	Yes
Permissible potential difference	
• between different circuits	60 V DC, 30 V AC
Standards, approvals, certification	
• CE mark	Yes
• Type of protection to EN 50020 (CENELEC)	II2 G (1) GD EEx ib[ia] IIC T4
• Type of protection to KEMA	04 ATEX 1248
Dimensions and weight	
• Weight, approx.	255 g
• Width	30 mm
• Height	129 mm
• Depth	136.5 mm

**ET 200iSP analog electronics modules
and terminal modules**

Overview

- The electronic modules are plugged into the associated terminal modules that must be ordered separately (with screw-type or spring-loaded terminals).
- When plugged in, the modules are automatically uniquely coded mechanically.
- Modules can be replaced under potentially explosive conditions during runtime.

Technical specifications

Analog input modules	6ES7 134-7SD00-0AB0	6ES7 134-7SD50-0AB0	6ES7 134-7TD00-0AB0	6ES7 134-7TD50-0AB0
Voltages and currents				
Power supply of measuring transducers				
- Short-circuit proof			Yes	
- Supply current, max.			23 mA; per channel	
Current consumption				
• from supply voltage L+, max.	30 mA	22 mA	320 mA	30 mA
• Power dissipation, typical	0.4 W	0.4 W	2.7 W	0.4 W
Analog inputs				
• Number of analog inputs	4	4	4	4
• Length of cable shielded, max	50 m	200 m	200 m	200 m
• Perm. input volt. for the current input (destr. lim.), max.			90 mA	50 mA
• Technical unit for temperature measurement, adjustable	Yes	Yes	Yes	Yes
Input ranges (rated values), voltages				
- Voltage	Yes			
- -80 mV to +80 mV	Yes			
- Input resistance (-80 mV to +80 mV)	1,000 kΩ			
Input ranges (rated values), currents				
- Current			Yes	Yes
- 4 to 20 mA			Yes	Yes; min. 295 Ohms
Input ranges (rated values), thermocouples				
- Thermocouple	Yes			
- Type B	Yes			
- Input resistance (type B)	1,000 kΩ			
- Type C	Yes			
- Input resistance (type C)	1,000 kΩ			
- Type E	Yes			
- Input resistance (type E)	1,000 kΩ			
- Type J	Yes			
- Input resistance (type J)	1,000 kΩ			
- Type K	Yes			
- Input resistance (type K)	1,000 kΩ			
- Type L	Yes			
- Input resistance (type L)	1,000 kΩ			
- Type N	Yes			
- Input resistance (type N)	1,000 kΩ			
- Type R	Yes			
- Input resistance (type R)	1,000 kΩ			
- Type S	Yes			
- Input resistance (type S)	1,000 kΩ			
- Type T	Yes			
- Input resistance (type T)	1,000 kΩ			
- Type U	Yes			
- Input resistance (type U)	1,000 kΩ			
Input ranges (rated values), resistances				
- Resistance		Yes		
- Input resistance (0 to 600 ohms)		0.6 kΩ		
Input ranges (rated values), resistance thermometer				
- Resistance thermometer		Yes		
- Ni 100		Yes		
- Input resistance (Ni 100)		2,000 kΩ		
- Pt 100		Yes		
- Input resistance (Pt 100)		2,000 kΩ

ET 200iSP

ET 200iSP power supply unit

Overview

The power supply (PS) is plugged into the associated terminal module TM-PS-A or TM-PS-B (with redundancy; to be ordered separately).

The power supply unit fulfills the following functions:

- It provides reliable isolated power supply for the ET 200iSP with the necessary operating voltages for:
 - Logic (through the backplane bus)
 - PROFIBUS DP interface of IM 152-1
 - Powerbus (for supplying the electronic modules)
- Takes over the safety limit of the output voltage
- Has an explosion-proof metal enclosure (explosion protection EEx d)
- Can be redundantly configured

6

Technical specifications

Power Supply (PS)	6ES7 138-7EA00-0AA0
Voltages and currents	
• Line supply/voltage failure buffering, min.	0.25 ms; for power bus and backplane bus; (15 ms for IM 152)
Load voltage L+	
- Rated value (DC)	24 V
- Reverse polarity protection	Yes
Current consumption	
• from supply voltage L+, max.	4 mA
• Power dissipation, typical	20 W
Ex(i)-modules	
Maximum values of the input circuits (per channel)	
- Um (fault voltage), max	60 V; dc
Status information/ interrupts/ diagnostics	
• Status display	Yes
Interrupts	No
Diagnostics	
• Diagnostic information can be read out	Yes; over IM 152
Diagnostic display LED	
• Group fault SF (red)	No
Isolation	
tested	
• across all secondary voltages	500 V AC
• across supply voltage and all secondary voltages	1500 V AC
Galvanic isolation	
• between supply load and electronic components	Yes
Standards, approvals, certific.

Terminal module TM-PS-B for redundant operation	6ES7 193-7DB00-0AA0

Overview

Distributed I/O station with degree of protection IP65/66/67 for application on the machine level without control cabinet

- Flexible fieldbus connection through interface modules for PROFIBUS DP and PROFINET (available soon)
- Modular design with up to 16 expansion modules for flexible adaptation to the automation task
- Comprehensive module range:
 - Digital and analog input and output modules
 - PROFIsafe modules (available soon)
 - Power modules for simple implementation of 24 V load groups
 - Motor starters up to 5.5 kW (available soon)
- Simple, quick assembly and high vibration strength due to rack
- Integration of safety technology with PROFIsafe
- High plant availability thanks to permanent wiring and the ability to replace electronic modules during operation (hot swapping)
- Low space requirements thanks to small footprint (I/O module e.g. 130 mm high and 45 mm wide)
- Scalable diagnostics concept, optionally with module-specific or channel-specific diagnosis of faults of connected sensors or actuators
- Simple configuration with ET 200pro configurator software

Application

SIMATIC ET 200pro is the new modular I/O system with high degree of protection IP65/66/67 for local, cabinetless applications. ET 200pro stands out through a small frame size and an innovative installation concept. ET 200pro can be optimized and very flexibly adapted to the requirements of the corresponding automation task with respect to the connection method, required I/Os and fieldbus connection. New features such as the integrated PROFIsafe safety technology, the PROFINET interface and the ability to hotswap modules permit it to be used for a wide range of applications.

With the integrated motor starters, conveyor applications can be implemented optimally, or drives of up to 5.5 kW can be controlled without control cabinet.

Design

The tried and tested separation of module and bus/power connection technology, which has already been used for the ET 200eco, is now also used for the digital and analog expansion modules of the ET 200pro. For the interface module this allows use of the T-functionality for the bus and 24 V power supply, and for the expansion modules it permits pre-wiring of sensor/actuator connections. This permanent wiring allows exactly one electronics module to be hot-swapped in the event of a fault without having to switch off the whole station. It can continue to operate fault-free while the module is being replaced. This ensures very high plant availability. When an electronics component is replaced, the whole I/O wiring can remain on the connecting module and does not have to be marked or removed.

Modules

The modules of the ET 200pro usually have two or three components. Interface and power modules as well as digital and analog expansion modules comprise:

- One bus connector which constitutes the backplane bus of the system
- One electronics module or interface module
- One connecting module

A backplane bus module is required for operation of motor starters.

A station is constructed from:

- One rack
- One interface module for PROFIBUS DP
- One connecting module for the interface module for PROFIBUS DP
 - CM IM DP direct with up to 6 M20 screwed cable glands
 - CM IM DP ECOFAST Cu (available soon)
 - CM IM DP M12, 7/8" (available soon)

Or optionally

- One interface module for PROFINET IO (available soon) with integrated M12 7/8" connection system
- Max. 16 expansion modules that can be mounted in stations up to 1 m in width

SIMATIC ET 200 distributed I/Os

ET 200pro

Introduction

Design (continued)

Expansion modules

The following expansion modules are available:

- Digital I/Os
- Analog inputs
- Analog outputs (available soon)
- Connecting modules IO
 - CM IO 4x M12 for digital or analog electronic modules
 - CM IO 8x M12 for digital electronic modules
- Electronic power modules (available soon)
- Connecting modules for power modules
 - CM PM-E directly with up to 2 M20 screwed cable glands
 - CM PM-E ECOFAST Cu
 - CM PM-E 7/8"
- Motor starter

Rack

Three different racks are available for mounting the ET 200pro:

- Narrow rack
The narrow rack supports complete pre-assembly on the workbench by means of two mounting flanges outside of the ET 200pro station.

- Compact rack
When the compact rack is used, the small footprint of the ET 200pro system can be used to best advantage.

- Wide rack
The wide rack is required for stations with integrated motor starters

Function

The SIMATIC ET 200pro is easily configured with STEP 7. A GSD file is available for interfacing with systems of other manufacturers.

Technical specifications

Electronics modules	<ul style="list-style-type: none">• Digital inputs/outputs• Analog inputs• Analog outputs
Motor starter	
Cables and connections	M12 circular connector with standard assignment for actuator/sensor
Transmission rate, max.	12 Mbit/s (PROFIBUS DP), 100 Mbit/s (PROFINET IO)

EM 141 and EM 142 digital expansion modules

Overview

- Expansion modules with digital inputs/outputs for connection of actuators/sensors
- With scalable diagnostics
 - Standard modules with module-specific diagnostics
 - High Feature modules with channel-specific diagnostics and parameterizable input delay or process interrupts (DI, up to 6 channels)
- Double or single assignment can be implemented for each M12 in the case of the 8DI module by selecting CM IO 4 x M12 or CM IO 8 x M12

SIMATIC ET 200 distributed I/Os

ET 200pro

EM 141 and EM 142 digital expansion modules

Technical specifications

Digital input modules	6ES7 141-4BF00-0AA0	6ES7 141-4BF00-0AB0
Supply voltages		
Rated value		
- 24 V DC	Yes	Yes
- permissible range, lower limit (DC)	20.4 V	20.4 V
- permissible range, upper limit (DC)	28.8 V	28.8 V
- Reverse polarity protection	Yes; against destruction if transmitter outputs reversed	Yes; against destruction; loads are activated.
Current consumption		
• from backplane bus 5 V DC, max.	20 mA	40 mA
• from supply voltage 1L+, max.	20 mA	20 mA
• Power dissipation, typical	2.5 W	2.5 W
Address area		
Occupied address area		
- Inputs	1 byte	1 byte
FH systems		
• Module for fail-safe applications	No	No
Clock synchronism		
• Clock synchronous operation	No	No
Digital inputs		
• Number of digital inputs	8	8
Number of inputs that can be driven in parallel		
• all mounting positions		
- up to 55 °C	8	8
Length of cable		
- Length of cable shielded, max	30 m	30 m
- Length of cable unshielded, max	30 m	30 m
• Input characteristic to comply with IEC 1131, Type 1	Yes	No
• Input characteristic to comply with IEC 1131, Type 2	No	Yes
Input voltage		
• Rated value, DC	24 V	24 V
• for signal 0	-3 to +5 V	-3 to +5 V
• for signal 1	13 to 30 V	11 to 30 V
Input current		
- for 1 signal, typical	7 mA	7 mA
Input delay (at rated value of the input voltage)		
• For standard inputs		
- can be assigned parameters	No	Yes
- at 0 to 1, min.	1.2 ms	0.5 ms; 0.5 ms/3 ms/ 15 ms/20 ms
- at 0 to 1, max.	4.8 ms	20 ms
- at 1 to 0, min	1.2 ms	0.5 ms 0.5 ms/3 ms/ 15 ms/20 ms
- at 1 to 0, max.	4.8 ms	20 ms

Digital input modules	6ES7 141-4BF00-0AA0	6ES7 141-4BF00-0AB0
Sensor supply		
• Number of outputs	8	8
Output current		
- up to 55 °C, max.	1 A	1 A
Sensor		
Connectable encoders		
- 2-wire BEROS	Yes	Yes
- permissible closed-circuit current (2-wire BEROS), max.	1.5 mA	1.5 mA
Parameters		
• Diagnostic interrupt		Yes
• Process interrupt		for 6 channels per channel per channel
• Diagnostics for wire breakage		
• Diagnostics for short-circuit		transmitter supply to M; per module
Status information/ interrupts/ diagnostics		
Diagnostics		
• Diagnostic functions	Yes	Yes; per channel, parameter-assignment
• Diagnostic information can be read out	Yes	Yes
• Wire break		Yes; monitoring, $I < 0.3 \text{ mA}$
• Short circuit		Yes; transmitter supply to M; per module
Diagnostic display LED		
• Group fault SF (red)	Yes	Yes
• Status display digital input (green)	Yes; per channel	Yes; per channel
Isolation		
• Isolation tested with	500 V DC	500 V DC
Galvanic isolation		
Digital input functions		
- between the channels	No	No
- between the channels and the backplane bus	Yes	Yes
Permissible potential difference		
• between different circuits	75 V DC / 60 V AC	75 V DC / 60 V AC
Environmental requirements		
Degree of protection and class of protection		
- IP65	Yes	Yes
- IP66	Yes	Yes
- IP67	Yes	Yes
Dimensions and weight		
• Weight, approx.	140 g	140 g
• Width	45 mm	45 mm
• Height	130 mm	130 mm
• Depth	35 mm	35 mm; without connection module

EM 141 and EM 142 digital expansion modules

Technical specifications (continued)

Digital output modules	6ES7 142-4BD00-0AA0	6ES7 142-4BD00-0AB0
Voltages and currents		
Load voltage 2L+	24 V	24 V
- Rated value (DC)	Yes; per channel, electronically	Yes; per channel, electronically
- Short-circuit protection	Yes; against destruction; loads are activated.	Yes; against destruction; loads are activated.
- Reverse polarity protection	Yes; against destruction; loads are activated.	Yes; against destruction; loads are activated.
Current consumption		
• from load voltage 2L+ (no load), max.	20 mA	40 mA
• from backplane bus 5 V DC, max.	20 mA	40 mA
• Power dissipation, typical	2 W	2.5 W
Address area		
Address space per module		
- With packing	4 bit	4 bit
- without packing	1 byte	1 byte
FH systems		
• Module for fail-safe applications	No	No
Digital outputs		
• Number of digital outputs	4	4
• Length of cable shielded, max.	30 m	30 m
• Length of cable unshielded, max.	30 m	30 m
• Short-circuit protection of the output	Yes; per channel, electronically	Yes; per channel, electronically
- Response threshold, type.	3	3
• Inductive switch-off voltage limited to	2L+ (- 47 V)	2L+ (- 47 V)
• Lamp load, max.	10 W	10 W
• Driving a digital input	Yes	Yes
Output voltage		
- for 1 signal	2L+ (- 0.8 V)	2L+ (- 0.8 V)
Output current		
- for 1 signal rated value	2 A	2 A
- for 0 signal residual current, max.	0.5 mA	0.5 mA
Parallel switching of 2 outputs		
- to increase power	No	No
- to redundantly drive a load	Yes	Yes
Switching frequency		
- at resistive load, max.	100 Hz	100 Hz
- at inductive load, max.	0.5 Hz	0.5 Hz
- at lamp load, max.	1 Hz	1 Hz
Summation current of the outputs (per group)		
- up to 55 °C, max.	4 A	4 A
Load impedance range		
- lower limit	12 Ω	12 Ω
- upper limit	4 kΩ	4 kΩ

Digital output modules	6ES7 142-4BD00-0AA0	6ES7 142-4BD00-0AB0
Parameters		
• Diagnostics for wire breakage		per channel
• Diagnostics for short-circuit		per channel
• Behavior at CPU/Master STOP		per channel
Status information/ interrupts/ diagnostics		
• Applying substitute values		Yes
Interrupts		
- Diagnostic interrupt		Yes
Diagnostics		
- Diagnostic functions	Yes	Yes
- Diagnostic information can be read out	Yes	Yes
- Wire break		Yes
- Short circuit	Yes; short-circuit of the outputs to M; per module	Yes
Diagnostic display LED		
- Group fault SF (red)	Yes	Yes
- Status display digital output (green)	Yes	Yes
- Channel fault display F (red)		Yes
Isolation		
• Isolation tested with	500 V DC	500 V DC
Galvanic isolation		
• between backplane bus and all other circuit components		Yes
• between the channels and the backplane bus		Yes
Digital output functions		
- between the channels	No	No
- between the channels and the backplane bus	Yes	Yes
Permissible potential difference		
• across different circuits		75 V DC/ 60 V AC
Dimensions and weight		
• Weight, approx.	140 g	140 g
• Width	45 mm	45 mm
• Height	130 mm	130 mm
• Depth	35 mm	35 mm; without connection module

EM 144 and EM 145 analog expansion modules

Overview

- Expansion modules with analog inputs and outputs for connecting sensors/actuators
- With diagnostics functionality, limit values and substitute values

Technical specifications

Analog expansion modules	6ES7 144-4FF00-0AB0	6ES7 144-4GF00-0AB0
Voltages and currents		
Load voltage L+	24 V	24 V
- Rated value (DC)	Yes; against destruction	Yes; against destruction
- Reverse polarity protection		
Current consumption		
• from backplane bus 5 V DC, max.	10 mA	10 mA
• Power dissipation, typical	1.1 W	1.1 W
Address area		
Address space per module		
- Address space per module, max.	8 byte	8 byte
Analog inputs		
• Number of analog inputs	4	4
• Length of cable shielded, max	30 m	30 m
• Permiss. input voltage for voltage input (destr. limit), max.	35 V	
• Perm. input volt. for the current input (destr. lim.), max.		40 mA
• Cycle time (all channels)	267 ms	267 ms
Input ranges (rated values), voltages		
• Voltage	Yes	
• 1 to +5 V	Yes	
• -10 V to +10 V	Yes	
• Input resistance (-10 V to +10 V)	100 kΩ	
• -5 V to +5 V	Yes	
Input ranges (rated values), currents		
• Current		Yes
• -20 to +20 mA		Yes
• Input resistance (-20 to +20 mA)		50 Ω
• 4 to 20 mA		Yes
• Input resistance (4 to 20 mA)		50 Ω

Analog expansion modules	6ES7 144-4FF00-0AB0	6ES7 144-4GF00-0AB0
Analog value formation		
• Measuring principle	integrating	integrating
Integration and conversion time/triggering per channel		
• with over-range (bits incl. sign), max	15 bit; at +/- 10 V, at +/- 5 V 14 bit at 0 to 10, at 1 to 5 V	15 bit; at +/- 20 mA 14 bit at 0 to 20 mA, 4 to 20 mA
• Integration time, ms	20/ 16,667	20/ 16,667
• noise suppression for interference frequency f1, in Hz	50/ 60	50/ 60
• Conversion time (per channel)	67 ms	67 ms
Smoothing of measured values		
• Parameterizable	Yes	Yes
• None	Yes; 1 x cycle time	Yes; 1 x cycle time
• Weak	Yes; 4 x cycle time	Yes; 4 x cycle time
• Medium	Yes; 16 x cycle time	Yes; 16 x cycle time
• Strong	Yes; 64 x cycle time	Yes; 64 x cycle time
Sensor supply		
• Short-circuit protection	Yes; per module; electronically against ground	Yes; per module; electronically against ground
Sensor		
Sensing element connection		
• for current measurement, as 2-wire measuring transducer		Yes
• for current measurement, as 4-wire measuring transducer		Yes

PM-E power module

Overview

- PM-E 24 V DC power module

Application

The PM-E 24 V DC power module is used for supplementary supply or division into groups of the 24 V load voltage for electronics modules within an ET 200pro station.

The following module is available:

- PM-E 24 V DC (available soon)

PM-E connection module (must be ordered separately):

- CM PM-E direct (with up to 2 M20 cable glands)
- CM PM-E ECOFAST Cu (with one ECOFAST Cu connection)
- CM PM-E 7/8" (with one 7/8" female connector)

Ordering data

PM-E 24 V DC power module	A	6ES7148-4CA00-0AA0
For backfeed and group formation of the 24 V DC load supply for electronic modules within an ET 200pro station.		
Accessories		
CM PM-E ECOFAST connecting module	A	6ES7194-4BA00-0AA0
For backfeed of 24 V load voltage, 1 ECOFAST Cu connection		
CM PM-E direct connecting module	A	6ES7194-4BC00-0AA0
For backfeed of 24 V load voltage, up to 2 M20 screwed cable glands		
CM PM-E 7/8" connecting module	A	6ES7194-4BD00-0AA0
For backfeed of 24 V load voltage, 1 x 7/8"		
Spare fuse	A	6ES7194-4HB00-0AA0
12.5 A quick-response, for interface and power modules, 10 items per package unit		
Accessories for CM PM-E ECOFAST		
PROFIBUS ECOFAST hybrid connector 180		
ECOFAST Cu, 2 x Cu, 4 x 1.5 mm ² , HANBRID connector		
• with male insert, 5 per pack		6GK1905-0CA00
• with female insert, 5 per pack		6GK1905-0CB00
PROFIBUS ECOFAST hybrid connector angular		
ECOFAST Cu, 2 x Cu, 4 x 1.5 mm ² , HANBRID connector		
• with male insert, 5 per pack		6GK1905-0CC00
• with female insert, 5 per pack		6GK1905-0CD00
Accessories for CM PM-E direct		
Power cables		6XV1830-8AH10
5-core, 5 x 1.5 mm ² , trailing type, sold by the meter, minimum order quantity 20 m, maximum order quantity 1,000 m		
Accessories for CM PM-E 7/8"		
7/8" connecting cable to power supply		
5-core, 5 x 1.5 mm ² , trailing type, pre-assembled with two 7/8" connectors, 5-pin		
• 1.5 m long		6XV1822-5BH15
• 2.0 m long		6XV1822-5BH20
• 3.0 m long		6XV1822-5BH30

SIMATIC ET 200 distributed I/Os

ET 200pro

ET 200pro motor starters

Overview

Motor starter

- Only two variants up to 5.5 kW
- All settings can be configured via the bus
- Extensive diagnostic messages
- Overload can be acknowledged via remote reset
- Current asymmetry monitoring
- Stall protection
- Emergency start function in the event of overload
- Current value transfer via bus
- Current limit value monitoring
- Direct-on-line or reversing starters
- Power bus can be plugged in using the new HAN Q4/2 plug-in connectors
- Conductor cross-sections up to 6 x 4 mm²
- 25 A per segment
(power is looped through using jumpers)
- Optionally available with 400 V AC brake contact.

Maintenance switch module

The maintenance switch module with its load disconnection function is used for safe isolation of the 400 V operating voltage while maintenance work is being undertaken in the plant and offers an integral group fusing function (i.e. additional group short-circuit protection for all externally supplied motor starters).

All stations can be optionally fitted with a maintenance switch module depending on the power distribution concept.

Safety local maintenance switch module

With the Safety Local modules

- Safety local maintenance switch module and
- 400 V shutdown module

can, when connected appropriately, achieve Category 4 safety level.

The safety local maintenance switch module is a maintenance switch that can be parameterized using a DIP switch and which has integral safety evaluation functions.

It is used

- To connect a 1 or 2 channel EMERGENCY-STOP circuit up to Category 3-4/Sil3 (protective door or EMERGENCY-STOP pushbutton) and parameterizable start response and
- For activating the 400 V shutdown module by means of a safety rail signal.

Benefits

The ET 200pro motor starter offers the following advantages:

- High flexibility thanks to its modular, compact construction
- Minimal variation in motor starter designs
(2 devices up to 5.5 kW)
- Comprehensive parameterization with STEP 7 HW Config
- Greater plant availability due to rapid replacement of devices
(easy mounting and plug-in wiring)
- Comprehensive diagnostics and information for preventative maintenance
- Parameterizable inputs for local control functions
(High Feature)
- Cabinetless installation thanks to the high IP65 degree of protection

Application

The ET 200pro motor starters can be used to protect and switch any three-phase load. They are an integral component of ET 200pro and are designed to the high degree of protection IP65. They are therefore ideal for use in modular, distributed I/O without a control cabinet or control box.

The protection concept with electronic overload evaluation and the use of the SIRIUS switchgear – frame size S00 – achieves a number of additional advantages for the Standard and High Feature motor starters which quickly pay off, especially for manufacturing processes that have high plant downtime costs:

- The bit-modular design makes engineering much simpler.
When the ET 200pro motor starter is used, the parts list is reduced to two essential items per load feeder circuit: the bus module and the motor starter. The ET 200pro is therefore ideally suited to modular machine concepts or solutions in conveyor systems and in machine tool manufacture.
- Expansions can be easily implemented by subsequent connection of additional modules. The innovative plug-in technology replaces the previously required wiring. Thanks to the "hot swapping" function (removal and insertion during normal operation), the motor starter can be replaced in seconds should it become necessary without the need for the ET 200pro station and therefore the plant process to be stopped. This makes the motor starters especially suitable for applications which require a high level of availability. The minimal variance (2 devices up to 5.5 kW) also reduces inventory costs.

The ordering option for motor starters with a 400 V AC brake output enables motors with 400 V AC brakes to be activated. The four locally acting inputs available on the High Feature motor starter can be used to implement special, autonomous functions that act independently of the bus and higher-level control, e.g. quick-stop functions for slider controls or end-stop shutdown. The status of these inputs is also signaled to the control.

When the optional maintenance switch module with the load disconnection and group fusing functions is used for the ET 200pro, the 400 V supply for the motor starter can be connected and disconnected locally.

Technical specifications

	Motor starter Standard DSe, RSe	Motor starter High Feature DSe, RSe
General data		
Motor starters that can be connected to ET 200pro or modules 110 mm in width	Max. 8	
Mounting dimensions (W x H x D) in mm		
• Direct starter and reversing starter	110 x 230 x 150	
Permissible ambient temperature		
• Operation	-25 °C to +55 °C, above +40 °C with derating	
• During storage	-40 °C ... +70 °C	
Permissible mounting position	Vertical, horizontal	
Vibration resistance in accordance with IEC 60068, Part 2-6	2 g	
Shock resistance in accordance with IEC 60068, Part 2-27	Half-sine 15 g/11 ms	
Current consumption		
• From auxiliary circuit L+/M (U1)	Approx. 40 mA	
• From auxiliary circuit A1/A2 (U2)	Approx. 200 mA	
Rated operating current for power bus I_e	25 A	
Rated operating voltage U_e	400 V	
Approval DIN VDE 0106, Part 101	up to 500 V	
Acc. to CSA and UL	up to 600 V	
For conductor cross-sections		
• Power infeed	max. 6 x 4 mm ²	
Degree of protection	IP65

2) The safety local maintenance switch module only operates when combined with the 400 V shutdown module.

Overview

Safety local isolator module

The safety local isolator module is a maintenance switch with integrated safety evaluation functions that can be parameterized over DIP switch.

It serves:

- the connection of a 1 or 2-channel EMERGENCY-STOP circuit up to Cat. 3-4/Sil3 (protective door or EMERGENCY-STOP buttons) and parameterizable start behavior
- to control the 400 V disconnecting module by means of a safety rail signal

400 V disconnecting module

The 400 V disconnecting module enables the safe disconnection of the operating voltage of 400 V up to Cat. 3-4/Sil3. It only functions in combination with the safety local isolator module.

Application

Safety local isolator module

The safety local isolator module features the same functions as a standard isolator module with an additional local safety function.

The safety local isolator module contains a 3TK28 41 module and is equipped with M12 terminals for the connection of external safety components.

Terminals 1 and 2 can be used to connect either 1-channel or 2-channel EMERGENCY-STOP circuits or protective door circuits (IN 1, IN 2).

For monitored starts, an external START switch can be connected to terminal 3.

The required safety functions can be set over 2 slide switches located under the left M12 opening.

In the event of an EMERGENCY-STOP, the safety local isolator module trips the downstream 400 V disconnecting module. This safely isolates the 400 V circuit up to CAT 4.

In combination with the 400 V disconnecting module, the safety local isolator module can be used for safety applications up to Category 4 to EN 954-1.

400 V disconnecting module

The 400 V disconnecting module can be used together with the safety local isolator module for local safety applications. It contains two contactors connected in series for safety-oriented tripping of the main circuit. The auxiliary circuit supply of the device is over a safety power rail in the backplane bus module.

In combination with the safety local isolator module, the 400 V disconnecting module can be used for safety applications up to Category 4 to EN 954-1.
